## \* link-list

temp = start { it's pointing to this } → { now it has control of 'start' block }

→ temp.value → you will get value

→ temp.next → it's point to the next block  
OR  
it's give next block address (next block name)

Ex:-

→ temp.next = <sup>next block</sup> address (name of next block)

(It's link with next block)  $\Rightarrow$  temp.next = temp\_node

o temp = temp.next → { <sup>temp</sup> node has control  
on 'temp node'  
block }
